COURSEWORK

3D Graphics
Probability Theory
Cloud Computing

SKILLS

LANGUAGES
Commercial projects:
Java • JavaScript • TypeScript
Hobby / OSS projects:
Kotlin • CoffeeScript
C • C++ • Assembly
Educational projects:
Clojure • Python • Rust
LUA • Go • Elm

FRAMEWORKS
Angular 1.x • React • Redux
React-Native • Spring MVC

VCS & BUILD SYSTEMS
Git • CMake • Gradle • Maven
Grunt • Gulp • Webpack

ENVIRONMENTS
Atom • SublimeText • IntelliJ IDEA-like
Vim • Console • Anything

OPERATING SYSTEMS
Ubuntu Server / Desktop • OS X
Inferno • Windows XP/7/8

DATA STORAGE & PROCESSING
Mongo • PostgreSQL • Hadoop

DEV OPS
Heroku • Amazon AWS • DigitalOcean
SSH • Ansible • Docker
Consul • Etcd • Nomad

EXPERIENCE HIGHLIGHTS

ADAMANTIUM | JS Software Developer
Nov 2015 - present time | Minsk, Belarus
- JS, ES2016, Webpack, Babel, React, Redux
- Using all the latest and modern JS technologies to create rich social analytics web application
- Implementing complex web app architecture from scratch in a small team

EXADEL | JS Software Developer
Aug 2015 - Oct 2015 | Minsk, Belarus

- Using javascript, angular and custom tooling to create rich and reusable web components

EXADEL | Android Software Developer
Jun 2014 - May 2015 | Minsk, Belarus

- Multi-component entertainment system for TVs, tablets and handhelds
- Low-level android programing, integrating with custom firmware
- Good skills in Android SDK and Java specifics

NONPROFIT PROJECTS

SWIG (GOOGLE SOC 2012) | Software Engineer
Jun 2012 – Aug 2012 | Minsk, Belarus
Was working on implementing Doxygen documentation parsing code, as part of SWIG wrapper generator. The main goal of the project was to make automatic documentation translator from C/C++ code (in Doxygen format) to JavaDoc / PyDoc documentation comments.
Obtained skills:
- working with old (about 10 years) and legacy code
- maintaining large parsers in yacc, understanding of grammar-based systems
- C/C++ coding and nontrivial problem solving

PLAN9 LAB (GOOGLE SOC 2013) | Software Engineer
Jun 2013 – Aug 2013 | Minsk, Belarus
Enhancing, developing and maintaining old (year 1999) Java application converter to Dis - Inferno OS system programing language bytecode. The resulting project was able to run compiled Java apps on Inferno OS. Obtained skills:
- quick learning various programming languages and technologies
- research and study of Java internals
- really low-level and system programming
- debugging in non-debuggable environments

ABOUT ME

I really love everything that can be expressed with computers, science or electronics. Since my early childhood I was doing some hobby-projects, first by hand and in the field of simple electronic devices, and later coding software projects. I really love open-source and the impact it had done on the world of IT, I love doing things for fun, for science or just because I can. I love to switch contexts, to do various different things. I have several non-IT hobbies, like dancing, music and fantasy worlds. I like new ideas, like thinking out-of-the-box, like discussing good ideas and plans. And I don't really like writing coherent texts, sorry for that! :)
